### DETAILED ACTION

1. The amendment filed 10/05/2007 has been received and considered. Claims 24-46 are presented for examination.

#### *Allowable Subject Matter*

2. Claim 24-46 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter:

While Barr et al. teaches a piston design support program for supporting design of a piston shape of an internal combustion engine including inputting specification values defining a crown type and shape of a piston, reading out an piston model having an intake-side recess and an intake valve model, and an exhaust-side piston model having an exhaust-side recess from a database, which stores a plurality of intake-side piston models and a plurality of exhaust-side piston models, in accordance with crown types of the piston, and deforming the intake-side piston model and the exhaust-side piston model using the specification values input in the inputting, combining the deformed intake-side piston model and the deformed exhaust-side piston model, nor the prior art of record discloses a method for predicting a rolling bearing at a reliability of a contact ratio, including:

(Claim 24) “reading out an intake-side piston model having an intake-side recess, and an intake valve model, ...independently,”

(Claim 35) “reading out a main body piston model, which represents a shape of a surface of the piston, ... independently;”

Art Unit: 2123

**in combination with the remaining elements and features of the claimed invention.**

It is for these reasons that the applicant's invention defines over the prior art of record.

*Conclusion*
